Poly-L-lactic acid
• Antiseptic
• 26 G sterile needles (several should be available)
• Single-use 1-3 mL (depending on physician practitioner provided by the end-user):

The following supplies are used with SCULPTRA and are to be INSTRUCTIONS FOR USE NOTIFIED TO THE CORRESPONDING ADDRESS:

- 1-3 mL sterile syringe
- 0.3 mL sterile syringe
- Applicator stick
- Light source for visualizing dermal plane
- Sterile cotton swabs
- Sterile saline
- SCULPTRA vials
- SCULPTRA pre-filled syringe

INSTRUCTIONS FOR USE

1. Patient Assessment:
   - Evaluation of need for treatment
   - Patient’s medical history
   - Patient’s skin type and thickness
   - Patient’s preferences
   - Patient’s age
   - Patient’s lifestyle
   - Patient’s expectations

2. Attach 18 G sterile needle to a sterile single-use 5 mL syringe.

3. Draw 5 mL of SWFI, USP into the 5 mL syringe.

4. The deep dermal plane:
   - When the appropriate dermal plane is reached,
     the area should be massaged.

5. The intermediate plane:
   - The intermediate plane is the area below the upper part of the dermis.
   - The intermediate plane is between the upper part of the dermis and the deep dermal plane.
   - The intermediate plane is used for treating wrinkles and folds.

6. The super-facial plane:
   - The super-facial plane is the area above the upper part of the dermis.
   - The super-facial plane is used for treating wrinkles and folds.

7. The superficial plane:
   - The superficial plane is the area above the super-facial plane.
   - The superficial plane is used for treating wrinkles and folds.

8. The dermis:
   - The dermis is the layer of skin that lies beneath the epidermis and above the subcutaneous tissue.
   - The dermis is used for treating wrinkles and folds.

9. The subcutaneous tissue:
   - The subcutaneous tissue is the layer of tissue that lies beneath the dermis.
   - The subcutaneous tissue is used for treating wrinkles and folds.

10. The muscle:
    - The muscle is the layer of tissue that lies beneath the subcutaneous tissue.
    - The muscle is used for treating wrinkles and folds.

11. The bone:
    - The bone is the layer of tissue that lies beneath the muscle.
    - The bone is used for treating wrinkles and folds.

12. The cartilage:
    - The cartilage is the layer of tissue that lies beneath the bone.
    - The cartilage is used for treating wrinkles and folds.

13. The fascia:
    - The fascia is the layer of tissue that lies beneath the cartilage.
    - The fascia is used for treating wrinkles and folds.

14. The skin:
    - The skin is the outer layer of tissue that covers the body.
    - The skin is used for treating wrinkles and folds.

15. The subcutaneous fascia:
    - The subcutaneous fascia is the layer of tissue that lies beneath the skin.
    - The subcutaneous fascia is used for treating wrinkles and folds.

16. The subcutaneous fat:
    - The subcutaneous fat is the layer of tissue that lies beneath the subcutaneous fascia.
    - The subcutaneous fat is used for treating wrinkles and folds.

17. The inframuscular fascia:
    - The inframuscular fascia is the layer of tissue that lies beneath the subcutaneous fat.
    - The inframuscular fascia is used for treating wrinkles and folds.

18. The preperitoneal fascia:
    - The preperitoneal fascia is the layer of tissue that lies beneath the inframuscular fascia.
    - The preperitoneal fascia is used for treating wrinkles and folds.

19. The parietal peritoneum:
    - The parietal peritoneum is the layer of tissue that lies beneath the preperitoneal fascia.
    - The parietal peritoneum is used for treating wrinkles and folds.

20. The diaphragm:
    - The diaphragm is the layer of tissue that lies beneath the parietal peritoneum.
    - The diaphragm is used for treating wrinkles and folds.

21. The respiratory muscle:
    - The respiratory muscle is the layer of tissue that lies beneath the diaphragm.
    - The respiratory muscle is used for treating wrinkles and folds.

22. The heart:
    - The heart is the layer of tissue that lies beneath the respiratory muscle.
    - The heart is used for treating wrinkles and folds.

23. The pericardium:
    - The pericardium is the layer of tissue that lies beneath the heart.
    - The pericardium is used for treating wrinkles and folds.

24. The pleura:
    - The pleura is the layer of tissue that lines the chest cavity.
    - The pleura is used for treating wrinkles and folds.

25. The lung:
    - The lung is the organ that lies within the chest cavity.
    - The lung is used for treating wrinkles and folds.

26. The pleural cavity:
    - The pleural cavity is the space between the two layers of the pleura.
    - The pleural cavity is used for treating wrinkles and folds.

27. The skin:
    - The skin is the outer layer of tissue that covers the body.
    - The skin is used for treating wrinkles and folds.

28. The subcutaneous fascia:
    - The subcutaneous fascia is the layer of tissue that lies beneath the skin.
    - The subcutaneous fascia is used for treating wrinkles and folds.

29. The subcutaneous fat:
    - The subcutaneous fat is the layer of tissue that lies beneath the subcutaneous fascia.
    - The subcutaneous fat is used for treating wrinkles and folds.

30. The inframuscular fascia:
    - The inframuscular fascia is the layer of tissue that lies beneath the subcutaneous fat.
    - The inframuscular fascia is used for treating wrinkles and folds.

31. The preperitoneal fascia:
    - The preperitoneal fascia is the layer of tissue that lies beneath the inframuscular fascia.
    - The preperitoneal fascia is used for treating wrinkles and folds.

32. The parietal peritoneum:
    - The parietal peritoneum is the layer of tissue that lies beneath the preperitoneal fascia.
    - The parietal peritoneum is used for treating wrinkles and folds.

33. The diaphragm:
    - The diaphragm is the layer of tissue that lies beneath the parietal peritoneum.
    - The diaphragm is used for treating wrinkles and folds.

34. The respiratory muscle:
    - The respiratory muscle is the layer of tissue that lies beneath the diaphragm.
    - The respiratory muscle is used for treating wrinkles and folds.

35. The heart:
    - The heart is the layer of tissue that lies beneath the respiratory muscle.
    - The heart is used for treating wrinkles and folds.

36. The pericardium:
    - The pericardium is the layer of tissue that lies beneath the heart.
    - The pericardium is used for treating wrinkles and folds.

37. The pleura:
    - The pleura is the layer of tissue that lines the chest cavity.
    - The pleura is used for treating wrinkles and folds.

38. The lung:
    - The lung is the organ that lies within the chest cavity.
    - The lung is used for treating wrinkles and folds.

39. The pleural cavity:
    - The pleural cavity is the space between the two layers of the pleura.
    - The pleural cavity is used for treating wrinkles and folds.

40. The skin:
    - The skin is the outer layer of tissue that covers the body.
    - The skin is used for treating wrinkles and folds.
